CABA maintains world's largest connected home, intelligent buildings research libraries

October 16, 2014

The Continental Automated Buildings Association, a non-profit trade organization dedicated to the promotion of smart home technologies and integrated and intelligent building systems, is pleased to announce that it has assembled the largest connected home and intelligent buildings research library in the world. The organization concurrently compiles a tremendous amount of research on "machine-to-machine" (M2M) and "Internet of Things" (IoT) technologies.

The research library resides within CABA's online [Member Research Library](#) and currently holds over 790 research reports, case studies and white papers. The CABA Member Research Library constitutes a key membership benefit of the organization. The library is assembled with aid from the CABA Information Council.

The CABA Information Council identifies and reviews white papers and research for the CABA Information Series, which is the most authoritative source for technical information in the home and large building automation sectors. Information Series reports, in turn, populate the CABA research library.

"We are extremely pleased to be able to undertake this service for the industry," stated Dr. Kenneth Wacks, Principal of Ken Wacks and Associates, and Chair of the CABA Information Council. "Our council executes subject matter reviews on a tremendous amount of industry data that can make businesses more competitive."

Many of the reports are technical in nature, while others focus on business process or market size trends.

"CABA is very proud to honor the efforts of this volunteer council," stated Ronald J. Zimmer, CABA President & CEO. "Through their hard efforts, CABA continues to fulfil its mandate to provide the latest data, trends and analysis to its membership and the entire industry."

As an added industry benefit, CABA provides access to older papers to the entire industry free-of-charge. CABA Information Series reports that have been issued three years previous are freely available for download in [CABA's Public Research Library](#). The public library also contains over 700 documents.
