

Jocelyn Millette of Hydro-Québec Joins CABA Board of Directors

June 7, 2016

The Continental Automated Buildings Association is pleased to announce Jocelyn Millette will represent Hydro-Québec on the CABA Board of Directors. CABA is a nonprofit industry association that provides information, education, and networking to help promote advanced technologies for the automation of homes and buildings.

"We are very happy to welcome Jocelyn Millette to the CABA Board," stated Ronald J. Zimmer. "As one of CABA's original founders, we are extremely appreciative of Hydro-Québec's continuing commitment to our organization, and to the home and building automation industry as a whole, especially in terms of industrial research."

Jocelyn Millette is the acting Head of LTE (Laboratoire des Technologies de l'Énergie). Focusing on energy-use technologies, LTE, the Hydro-Québec research institute's energy technology laboratory, puts technological innovation to work for the company's customers. Located in Shawinigan, the laboratory brings together the expertise of some 60 specialists in building energetics and industrial energetics. As Québec's leading research facility in technological innovation with respect to energy efficiency, LTE has a wide variety of equipment and specialized testing methods.

Through its research into new technologies and performance evaluations of promising options, the laboratory meets the need of Hydro-Québec's customers (residential, commercial, institutional and industrial) to become more efficient in the way they consume energy or to develop special applications. The laboratory's services are offered outside the company.

"I am pleased to offer my services to the CABA Board of Directors and to the industry-at-large," said Millette. "My experience in industrial research will assist the organization in its continuing promotion of automation and system integration in homes and large buildings through the organization's collaborative research program."

Millette replaces Michel Dostie, Manager, Expertise in End-use Technologies at Hydro-Québec, who recently retired.

About CABA

The Continental Automated Buildings Association (CABA) is an international not-for-profit industry association dedicated to the advancement of intelligent home and intelligent building technologies. The organization is supported by an international membership of over 330 organizations involved in the design, manufacture, installation and retailing of products relating to home automation and building automation. Public organizations, including utilities and government are also members. CABA's mandate includes providing its members with networking and market research opportunities. CABA also encourages the development of
